TOTAL		414

Additional Thoughts from Nurse Practitioners Relevant to Alzheimer's & other forms of Dementia

- Progression of dementia to Alzheimer's needs more information
- Further education is needed for the management of behavioral disturbances in dementia
- Management of mood disorders and insomnia, behavior changes, agitation and irritability with Alzheimer's and how to diagnose and treatment.
- Caring for burnout caregivers and providers dealing with Alzheimer's patients.
- Early assessment and identification of patients essential to early treatment and care. More training needed for nurses and home caregivers.
- Developing care at home practices
- Differentiating between them more clearly
- Medication management, treatment of behaviors, and family education and support.
- Resources for family members to help them develop appropriate coping and responses and to understand that becoming outwardly angry and scolding the afflicted is hurtful and unproductive.
- Caregiver support resources; medication compliance issues
- Expanded gerontology education for APRNs
- Screening and need to use screening tools other than Mini-Mental such as Louis University. Mental Status (SLUMS) Examination and The Montreal Cognitive Assessment (MoCA)
- Activities, safety, nutrition especially vit B, D, proteins, etc.
- Teaching families to interact with Alzheimer's/dementia patient manage challenging behaviors and keeping family member safe.
